INTRODUCTION ABOUT PSC

PSC, in short of polygon shanks for stationary tools, is a modular tooling systems with tapered-polygon coupling which enables stable and high precision positioning and clamping between tapered-polygon interface and flange interface simultaneously.

● HIGH TORQUE TRANSMISSION

Both surfaces of the tapered-polygon and flange are positioned and clamped, providing an extraordinary high torque transmission and High bending strength resulting in excellent cutting performance and increasing productivity.

● HIGH BASIC STABILITY AND ACCURACY

By adapting PSC positioning and clamping, it is an ideal turning tool interface to guarantee repeated accuracy $\pm 0.002\text{mm}$ from X, Y, Z axis, and reduce machine downtime.

● REDUCED SET-UP TIME

Time of set-up and tool change within 1 minute, leading to significantly increased machine utilization.

● FLEXIBLE WITH EXTENSIVE MODULARITY

It will cost fewer tools to process by the using of various arbors.

* Available in six sizes, PSC3-PSC10, Diameter. 32, 40, 50, 63, 80, and 100.
